

Transform a Nextel® Walkie-Talkie phone into a powerful, secure, low cost credit card processing terminal.

With the Semtek® / Nextel® solution from Sprint, you can provide merchants with card acceptance services virtually anywhere anytime, in real-time. Quick and secure authorization of all major credit cards.

This easily transportable solution is:

Secure

Card data is encrypted when the card is swiped, which helps protect the cardholder and reduce ISO Cardholder Information Security Program (CISP) risk.

Easy to Set Up

Takes less time to load, activate and train than a dial-up POS terminal and since the merchant is used to using a mobile phone there is immediate technology adoption.

Cost Effective

Instead of buying bulky, expensive equipment, Nextel and Semtek offer an affordable 'turn-key' solution.

- Enable non-acceptors to build business through credit card payments.
- Sign prospective merchants by reducing their credit card acceptance costs while increasing your revenues through servicing this under penetrated channel.
- Provide your merchants with "card present rate" resulting in an estimated 30% reduction in merchant processing costs.
